- First put water in the tank; add the SuperMix of your choice and stir well.
- In areas with "soft" water addition of Ca 15 when using the SuperMixes may be necessary. In that case always mix-in Ca 15 first, then add SuperMix.
- BASIC: When using Nutri- or Coco Nova: first add A; stir well, add B and stir well again.
- When using Nutri- or Coco Nova: first add A; stir well, add B and stir well again.
- Let the mix rest for an hour, then adjust pH to 5,8.

- The dosage of the main fertilizers may be increased \pm 15% if necessary.
- The last week before the harvest only use water with additives, without fertilizers.
- When growing plants with a long flowering period that like the Haze SuperMix, the schedule may be prolonged as much as necessary.
- DEDICATED: Use BioRoots while planting or re-planting in a 1% solution. Repeat after 30 days. In stressful situations weekly repetition is advised.
